Lockstraps

I recently did a review of Lock Straps, wow what a product.

1: It consists of an all new spring loaded combination lock fitted on a larger, more durable carabiner. It has an 8 strand steel cable embedded inside the strap to increase the working load capabilities of the strap on top of giving it an unsurpassed theft protection.

2: The 8 strand stainless steel cable embedded inside the strap, the cable is just large enough that you can't cut it with a knife and just small enough for bolt cutters to not do any damage to the strap.

3: The soft strap allows for the relief of knowing you're not scratching, denting, or scaring your racks, handle bars, and or truck/trailer hook ups.

These straps are some of the most durable, straps I have seen on the market today. I feel much more comfortable knowing my quad is safe tied down with these straps.

Here is a video I did about the straps.

You can visit and buy these straps at <http://www.lockstraps.com>. Like I said an amazing product that I will continue to use on daily basis.
